

KRAMES *Exit-Writer*TM

Emergency medicine discharge
instructions and tools.

KRAMES.
PATIENT EDUCATION

Discharge patients in less than 3 minutes with Krames Exit-Writer®.

“Krames Exit-Writer is fifty percent cheaper...and significantly faster than our previous method of discharging patients (handwritten/preprinted instructions).”

— Ed M. West, MD, FACEP, Medical Director & Chair,
Department of Emergency Medicine, Santa Rosa Hospital

Krames Exit-Writer® is the industry leader for emergency medicine discharge instructions. Because the software was designed by a practicing, board-certified emergency physician, it works the way emergency medicine professionals think. It’s easy to learn and use with no formal training required.

Krames Exit-Writer offers everything your facility needs to quickly, easily and effectively discharge patients from your busy ER.

Easily access emergency medicine discharge instructions.

From just two primary screens, the program makes it easy to discharge patients quickly with just the right amount of information.

The **Instruction Screen** provides easy access to 1,500 discharge topics — each in English and Spanish (3,000 discharge instructions in all) — including more than 200 lab tests.

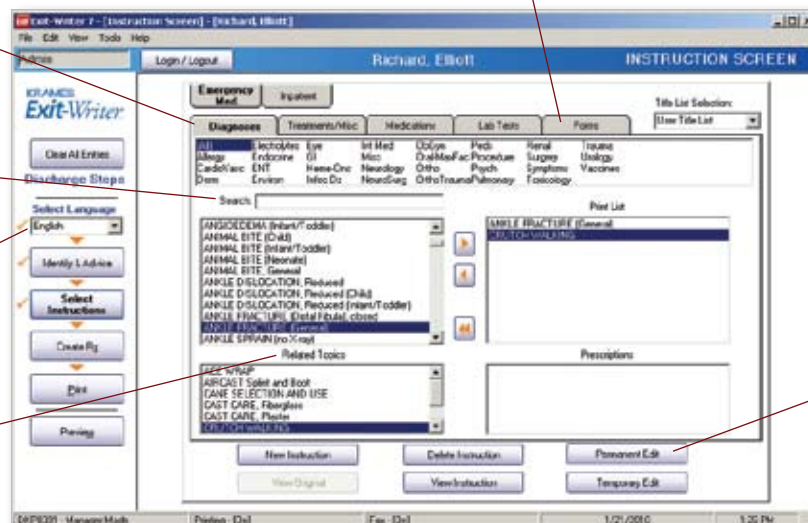

Browse through a wide range of topics on diagnoses, treatment options, health promotion topics, medications and lab tests.

Find any topic in seconds with the easy-to-use search function.

All instructions are provided in English and Spanish. Plus, 150 of the most popular topics are also available in Chinese, Russian and Vietnamese.

View related topics for all content selections.

Access forms to assist with informed consent, school and work-release, and more.

Easily edit content permanently or for a specific session.

The **Patient Entry Screen** allows you to quickly enter or access patient and physician information, special instructions and notes.

The screenshot shows the 'Patient Entry Screen' in the Krames Exit-Writer software. The interface includes a sidebar with navigation buttons like 'Clear All Entries', 'Discharge Steps', 'Select Language', 'Identify & Advice', 'Select Instructions', 'Create Rx', 'Print', and 'Preview'. The main area contains fields for patient information (Last Name: Richard, First Name: Elliot, Med. Record#: 2877356), attending doctor (Smith, Tom), and referral physicians (Process, Bob). There are sections for 'Follow-up Advice' (with options for calling or scheduling appointments) and 'Additional Advice' (with a 'Phrase List' button). A 'Tests Performed' button is also visible. Callout boxes provide the following explanations:

- Eliminate redundant entry by linking to your registration system.** (Points to the patient information fields)
- Select the attending or referral doctors from a list or automatically from the hospital's system.** (Points to the 'Attending Dr.' and 'Referral' fields)
- Select referral physicians and instructions from pull-down menus to quickly provide follow-up instructions.** (Points to the 'Follow-up Advice' section)
- Indicate tests performed and print related instructions.** (Points to the 'Tests Performed' button)
- Add additional discharge advice or instructions. Choose common phrases from a list or add your own.** (Points to the 'Additional Advice' section)
- Automatically fax notes or a summary of the care you provided directly to the referral doctor.** (Points to the 'Fax Notes to Referral Doctor' section)

Electronic prescription writing improves patient safety.

Krames Exit-Writer reduces clinician time spent hand-writing prescription medications and receiving calls from confused pharmacists. Use the prescription-writing feature to create legible and accurate prescriptions quickly and easily.

Medication reconciliation made easy.

Krames Exit-Writer's Medication Reconciliation Tool gives your facility a fast and easy way to document and record patient medication status and comply with medication safety requirements. An electronic copy of all information given to the patient is captured in the patient record.

Integrate Krames Exit-Writer into your workflow.

Krames Exit-Writer can interface with your existing technology via an optional HL7 interface. This technology lets you easily transport patient information directly into Krames Exit-Writer from your EMR or HIS.

Another option is to license content to add directly into your applications. All discharge instructions are coded to ICD-9, CPT and MeSH, allowing you to trigger relevant content entirely within your EMR.

Krames Exit-Writer discharge content is also available in the Krames On-Demand® print-on-demand application.

Improve outcomes with industry-leading patient discharge instruction content.

Developed by experts.

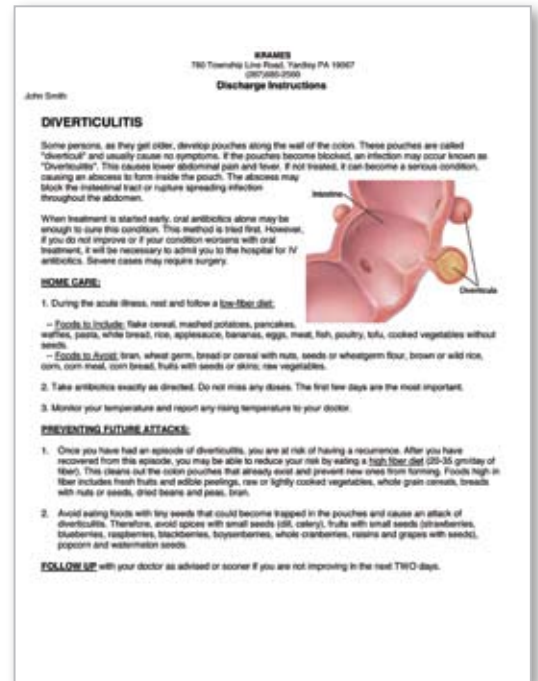

- ▶ Written by a practicing, board-certified emergency physician
- ▶ Reviewed and edited by Krames and a team of professional reviewers
- ▶ Five languages translated by Krames' own in-house translations team
